Subject: Additional NNK Metabolite validation data

RE: Additional NNK validation ...

Additional NNK validation data...

Dear Colleagues–

As we discussed the validation status of the NNK Metabolites method with Covance, they expressed a belief that their method was better than the validation data indicated, because they had gained skill in doing the validation experiments AND the pilot samples. I invited them to demonstrate that by doing another validation. They have conducted additional validation experiments and those data are included in one of the messages above. We are interested in your comments. I will be on medical leave starting Thursday, June 27. Please send any comments after that date to Shixia Feng.

Thanks in advance for your input.

Best regards,
Robin

P.S. Regina--Please let me know if you receive this. I think I have the Richmond email address but want to be certain.
